The Center of Excellence in Wireless and Information Technology's 12th annual international conference – CEWIT2015, was held at the Melville Marriott. It billed itself as “New York’s premier IT conference and international forum on emerging technologies for a smarter world.” For two days, scientists, academicians, inventors, corporate executives and investors from around the globe met and conferred on emerging technologies in healthcare, infrastructure and energy through a series of workshops, discussion groups and networking sessions designed to foster a smarter global environment.

Satya Sharma, director of the NYSTAR-funded center of excellence on the Stony Brook University campus, noted ramped-up international presence scheduled for CEWIT2015, with over a dozen companies from Israel slated to attend, joined by “closer to 20” from South Korea.
